

# FACTORY SOLUTIONS

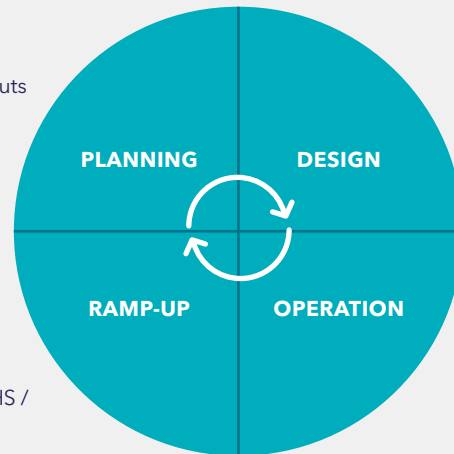

Planning and executing a greenfield building or a relocation project is complex and often creates business disruptions and distractions. Most of the time it is an extraordinary event in a company's life, and many companies do not have the capacity nor the expertise.

A new factory construction or relocation involves careful planning as all functions of the company are impacted. As in product development, 80% of the costs are set in the design phase, and a cross-functional and integrated action plan is needed to ensure success at all project phases.

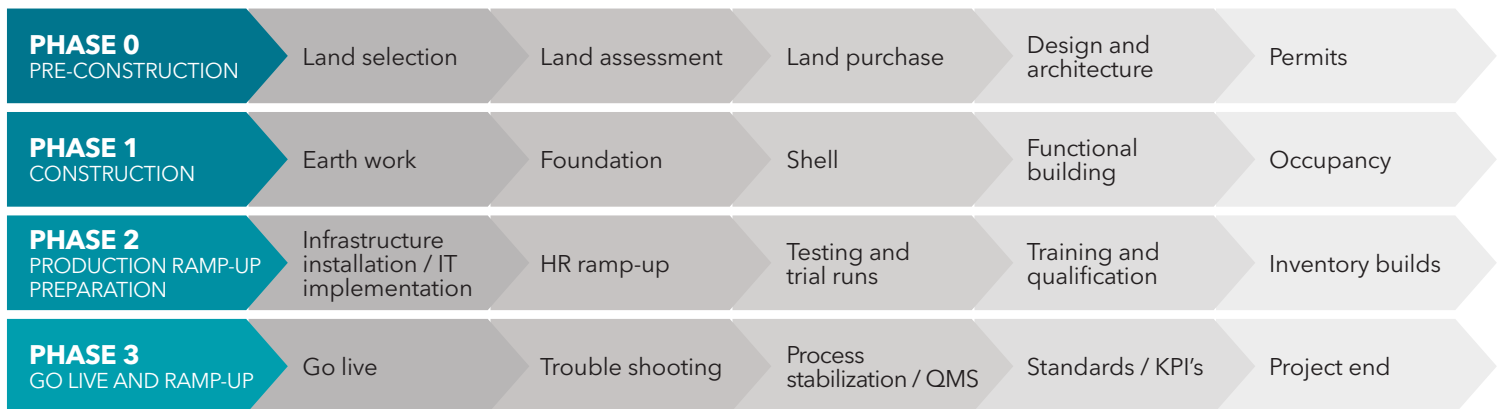

Expansion is more than duplicating what you already have. It is an opportunity to evaluate and leverage smart technology, automation, production and logistics infrastructure to make you more efficient and more profitable. A new building is a unique chance to leap forward, and you should take full advantage of that opportunity. Altix is your ideal partner from coaching and supporting your team to fully integrated turn key project management solutions.

- Pre-study
- Block layout
- Functional layouts
- Industrial engineering
