- New Product Introduction (NPI)
- Project / Program Management
- Technical Sales

Steve is a senior strategic advisor and consultant with 35 years of experience in technical business development, process improvement, and engineering management, and has a demonstrated history of working globally in the high-tech consulting industry. Steve's high-level positions and expertise range in diverse industries such as aerospace, energy/power, and medical equipment.

Steve began his engineering career working for GE Aviation where he grew through multiple executive roles thanks to his deep understanding of end-to-end solutions, from traditional engineering to state-of-the-art analytics and integration with supply chain and manufacturing.

Steve's strong engineering foundation, global resource knowledge, and passion for process optimization has allowed him to build a successful track-record in cost reduction methodologies, product costing, business leadership, and strategic growth. Steve is excited to partner with middle-market industrial companies to help them reach their full potential.

A highly accomplished business leader with a strong ability to identify opportunities, Steve has recently focused on high-tech business development in emerging markets. He has excellent business acumen coupled with a very strong technical background, and an exceptional business network.

Steve is a British native who has proudly served on the executive Board of Cincinnati European – American Chamber of Commerce. Steve holds a Master's in Aviation Management from Embry-Riddle University, a Bachelor of Science in Engineering from Loughborough University UK, and is a licensed Professional Engineer (PE) in Ohio, and Certified Engineer (CEng) in Europe.
